

Peer Review 1 of Modelling II

Reviewer: Yanxin Li

Reviewee: Rimli Sengupta

Topic: Section 1 Preliminaries

In this review I will provide my overall impressions of comments on both your written report and the R code you provided on your GitHub.

1. Comments on written report (Sol-Section1)

Your solutions are well organized and the format is readable. You have almost typed all your answers except that exercise 1.17 which you linked the online solutions. For exercise 1.27, you provide two methods, which is fairly great to understand this kind of problems. You also differentiated matrix (or vector) and scalar and I think I should do so. However, it would be better if you could include the problems as well so that readers do not have to check the problems in another file.

2. Comments on R code (Prestige.R)

The code is neatly formatted except that “=” and “<-” both exist through the coding. It might be better to keep consistent.

3. Conclusions

I hope this review has been helpful. Basically, the written report and the code look perfect. I hope to discuss the following exercises and share what is good for us to improve.
